

# AERIS ATMOS LX BC

## The best of both worlds.

The innovative hybrid air cell design of the AERIS ATMOS LX BC allows the freedom of movement and other benefits you have come to expect from a rear-inflation BC. However, the unique wrap-around design of the AERIS Atmos BC provides you with more lift than most BC's; as well as an improved, upright orientation when on the surface.

The AERIS ATMOS LX BC offers multiple adjustment and attachment points, allowing customization of the BC specific to the divers needs. The ATMOS LX is weight-integrated with a combination of dumpable (20 lbs.) and non-dumpable (10 lbs.) weight pockets.
